

Wave® petunias

📖 Plant Wave® petunias in a pot. Plant them in early May. But watch out for frost! Put the pot on a patio or balcony. Petunias love sun!

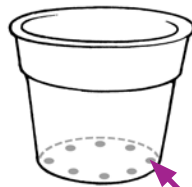

You will need

■ a 12-inch pot (a 30-cm pot) with holes in the bottom

■ 3 Wave® petunia plants

■ fertilizer

■ potting soil

hole

Note: Use a **light** soil mix in your pot. The bag might say soilless potting mix or potting soil.

Look for Wave® petunias at a garden centre.

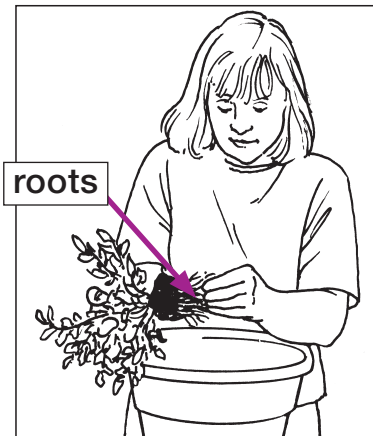

➡ More on page 2

What to do

1 Put some potting soil in the pot. Leave about 6 inches (15 cm) of space on top.

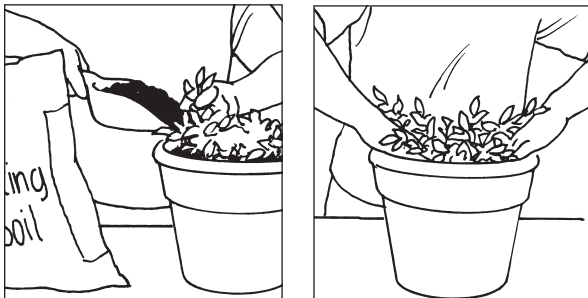

2 Take the petunias out of their pots. **Gently** pull apart some of the roots.

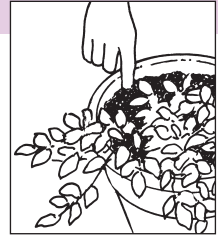

3 Put the plants on top of the soil.

4 Put some soil around the plants. Press down the soil.

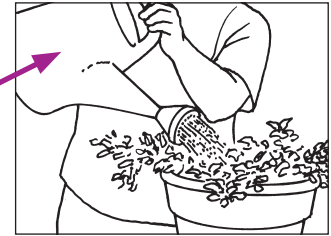

5 Leave about 1½ inches (3.8 cm) of space at the top of the pot.

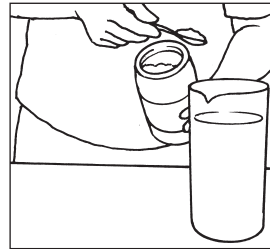

6 Water the petunias.

watering can

7 Fertilize the petunias too. Use fertilizer that you mix with water. Look for numbers on the label. Choose 20-20-20.

8 Put the pot in a sunny place.

Tips

- ✓ Don't let the soil dry out. Water every day in hot weather.
- ✓ Fertilize your petunias often. Put a pinch of fertilizer in your watering can every time you water the petunias.
- ✓ Cover your petunias or bring them inside if it will be 0°C or colder.
