A person regularly uses a hot-air popper to make popcorn and wanted to test which brand of kernels would make the most popcorn.

They bought four brands of kernels and measured the same mass of kernels from each brand. One brand at a time was put into the hot-air popper and the kernels were heated for the same length of time. After the heating was finished, they removed the unpopped kernels and then measured the mass of popcorn produced.

The data from the four brands of kernels tested in the investigation are shown in the table below.

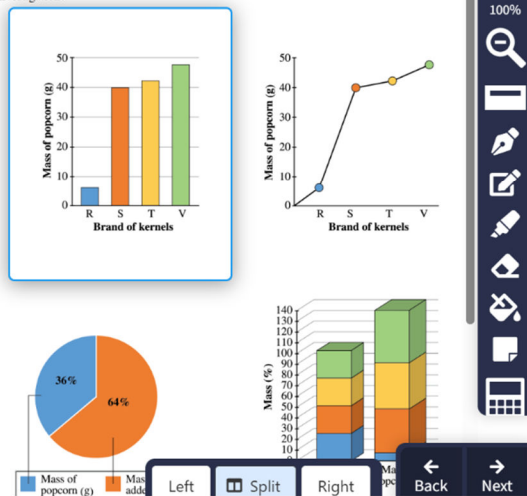

Brand of Kernels	Mass of Kernels Added to Hot-air Popper (g)	Mass of Popcorn (g)
R	60.0	6.1
S	60.0	39.9
T	60.0	42.2
V	60.0	47.6
